VIESA® Kompressor II

The air that renews itself

Kompressor II is a air-conditioning unit for the driver to rest when the vehicle is stationary.

It is a product manufactured in Europe.

With the new Kompressor II , COLVEN reinstates its commitment to the transport industry.

By improving the driving experience, we increase the company's productivity and offer the driver the best climate in the cabin, whatever alternatives the road proposes.

The Kompressor II represents a total updating of the product. It is smaller, lighter and quieter, it has a greater cold generation capacity, it vibrates less and it is more easily installed.

➤ Ideal cabin adaptability

➤ Easy-to-read display

ADVANTAGES OF VIESA KOMPRESSOR II

- > It is 5 mm lower than the previous model.
- > Better design of interior and exterior components.
- > Quieter.
- > The new design of the compressor holder reduces vibrations.
- > The assembly of the evaporating unit has been simplified.
